

The Honorable Marlene H. Dortch  
Federal Communications Commission  
445 12th Street S.W.  
Washington, DC 20054

Dear Ms. Dortch:

Attention: Commissioners

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarming, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

Russell Blalack  
1081 Milky Way  
Cupertino, CA 95014-5008

The Honorable Marlene H. Dortch

The Honorable Marlene H. Dortch  
Federal Communications Commission  
445 12th Street S.W.  
Washington, DC 20054

Dear Ms. Dortch:

Attention: Commissioners

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarming, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

Denee Caterson  
PO Box 85502  
Seattle, WA 98145-1502

Dear Ms. Dortch:

Attention: Commissioners

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of migratory birds.

The populations of many species of migratory birds are dropping while pressures on them are increasing. If we don't want to lose some species completely, we need to reverse this trend, and to do that we need to improve conditions for migratory birds. Sometimes we don't know what to do or how to do it, but in this case the FCC is fortunate to have scientific recommendations available from the US Fish and Wildlife Service.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which are estimated between 5 million and 40 million each year.

I can think of only one reason why the FCC would refuse to implement these recommendations, and that would be a perceived need to compromise between the competing special interests of environmentalists and communications businesses. There is a threefold response to this:

1. Preserving endangered and threatened species is in the interests of everyone, especially future generations, not just environmentalists.
2. A compromise has obviously already been made in the FWS recommendations, since the best solution would be to remove all towers.
3. Compromise is not the solution where the choice is to sacrifice something which cannot defend itself (migratory birds) or require communications companies to act responsibly in making use of the privilege of broadcasting. I ask the FCC to abandon politics and do the right thing for migratory birds.

Thank you for accepting my comment.

Sincerely,

Lisa Gorn  
1111 County Highway 8  
Morris, NY 13808-2140
